

Myco Chum® Premium Microbe Food – with Kelp, Molasses, Fish Hydrolysate and Humic Acids

Myco Chum 1-0-3 is a premium, organic microbial food containing a proprietary blend of molasses, fish hydrolysate, liquid kelp, humic acids, and nutrients. Use Myco Chum throughout your plant's entire lifecycle to optimize results.

Mix 5 ml (1 tsp) into 4 liter for a light feed and water into plants. May use up to 15 ml (1tbsp) per gallon. Do not exceed. May be used to brew compost tea at a rate of up to 1 tbsps per 4 liter.

King Crab® – Liquid Bacteria Product

key to nutrient uptake is beneficial bacteria. The active microbes in King Crab were specifically selected to be used as a supplement to the regular feeding schedule to boost effectiveness and plant performance during the veg and bloom phases. These microbes enhance the absorption of phosphorous and micronutrients which is key to higher yields and quality flowers.

How to use:

King Crab® can be used on seeds, cuttings, in coco and soil, or in any hydroponic system.

Soil or Existing Plants: Mix 1/2 mL per 4 liters of water and saturate rootball with a solution. King Crab can be watered in by hand, mixed in a fertigation system or sent out through drip lines.
Hydroponics

Hydroponics: Mix with water at 1/2 mL per 4 liters of water. King Crab can be used with any fertilizer line.

*It is ok to use a higher concentration than recommended. Do not exceed 5x rate.

**Shake well before use.

***Use weekly for best results.

Orca® Liquid Mycorrhizae – with Beneficial Bacteria

Orca is a cutting-edge liquid microbial product. The mycorrhizae build a microbial system in and on plant roots which enhances water and nutrient uptake. This concentrated and diverse mix of mycorrhiza and beneficial bacteria is designed to be watered in or run through hydroponic or irrigation systems. Orca is an easy and effective way to treat your existing plants, landscapes and gardens.

How to use:

Orca® can be used on seeds, cuttings, in coco and soil or in any hydroponic system.

Seeds: Use 1-2 drops directly on seed.

Cuttings: Soak starter cubes in Orca® at 1-3 mL per 4 liter of water for up to an hour. Orca® can also be used in pre-soak solution.

Hydroponics: Use 5 mL per 40 liter of water every reservoir change from start to finish.

Amount of Water– Orca® (40 liter– 5 mL) (80 liter–10 mL) (160 liter–20 mL) (200 liter–50 mL)

Soil, Coco and Topfeeding: Use 1-5 mL per 4 liter of water. Water into existing plants.
